

Add Drama to your Evenings

Landscape lighting lets you enjoy the beauty of your outdoor setting during the evening hours, night after night! In addition to its many safety and security benefits, landscape lighting can significantly expand your living space while extending your time for recreation, relaxation, and entertaining outdoors! Our crews have years of experience installing low-voltage lighting systems for many of our clients that wanted us to "light up their nights"!

By far the most exciting aspect to low voltage outdoor lighting must be the dramatic effect it can have on your landscape after dusk. Annuals show their bright colours, large specimen trees and shrubs come alive with dancing shadows and up-lit canopies, and architectural features of your home and garden show completely different features than they did during the day.

Our fully certified landscape lighting technicians can help you design a dream landscape lighting system that you can afford.

TIP: Wear gloves at all times when handling a halogen light bulb. The oils on your skin will eat into the quartz of the bulb as soon as the bulb gets hot and will drastically shorten the lifespan of the bulb.

Commitment to Excellence

At University Sprinklers, our Commitment to Excellence Program guarantees the quality, reliability and durability of your landscape lighting, and covers planning, product selection, installation, service and warranty.

Warranty

All of our irrigation systems are backed by a one (1) year warranty covering labour and a two (2) year warranty covering parts. Our head office can be contacted year-round.

Christmas Light Installations

University Sprinklers is now installing **high impact** holiday lighting. Get in touch today to start planning to light up your holidays!

Components

Multi-Tap transformers provide for a flexible voltage system that can be configured to fit virtually any landscape and outdoor lighting application.

Photocells sense existing light and turn electric lights on when natural light levels are low, off when light levels are higher.

With digital or mechanical timers you can save energy by having landscape lighting turn on and off at predetermined times. Astronomical timeclocks, which make seasonal adjustments, are also available. If lighting is needed for only a portion of the night, a photocell can be used to turn lighting on and a timer to turn it off.

LED Lighting

Did you know LED lights can offer up to 90% savings in energy costs? If you are looking for ways to go green, consider LED landscape lighting.

Many landscape lighting fixtures can be used with readily available LED bulbs. LED lights do not contain mercury, and they are free of hazardous chemicals. They are highly efficient, they conserve energy, they save money, and they have a long bulb life. Today's LED bulbs come in a variety of shades and intensity to suit your needs. Eco-friendly LEDs are a safe, reliable, economical option for lighting outdoor areas.
